

## Continental introducing new conveyor belting with proprietary anti-stick cover compound

- ContiClean is a premium non-stick solution for the top cover
- Designed for multiple applications including potash, coal, aggregate, salt
- Suitable for most applications where material carry-back is a major concern

FAIRLAWN, Ohio, March 19, 2019. With a goal of expanding its product portfolio, technology company Continental is offering to its conveyor belting customers a more complete range of options by introducing a new non-stick compound solution - called ContiClean – for the North American market.

“This product is especially suited to customers whose applications require aggressive or additional scraper systems to remove the buildup of material adhering to the conveyor cover,” said Chris Marchant, Continental’s product manager for conveyor belting. “Excessive material build-up can transfer to other conveyor components like idlers, and that could lead to tracking issues and damage the conveyor belt and system. Scraping to clean this excess material off is costly and can lead to significant downtime. This proprietary ContiClean compounding solution works to minimize those costly instances.”

ContiClean is applicable to applications that convey sticky materials such as titanium dioxide, iron pyrites, silica, compost, de-sulphurised gypsum as well as potash, salt, coal and aggregate. “Damp and sticky materials tend to adhere to the covers” said Marchant. “The consequences are costly for conveyor operators, as the acquisition, installation and servicing of belt cleaning systems or scrapers are all expensive.”

The ContiClean non-stick solution is specific to the top cover rubber that is in contact with the material being conveyed. ContiClean is available through Continental’s North American distribution network.

Continental develops pioneering technologies and services for sustainable and connected mobility of people and their goods. Founded in 1871, the technology company offers safe, efficient, intelligent, and affordable solutions for vehicles, machines, traffic and transportation. In 2018, Continental generated preliminary sales of around €44.4 billion and currently employs around 244,000 people in 61 countries and markets.

As a division in the Continental Corporation, ContiTech is one of the world's leading industrial specialists. Its customers can be found in key industries such as machine and plant engineering, mining, the agricultural industry, and the automotive industry. With around 47,000 employees in 42 countries, the company uses its development and material expertise for products and systems made of rubber, polyamide, metal, textile, and electronic components to combine these with individual services. ContiTech also offers functional and design-oriented living solutions and is always searching for customer-friendly and environmentally-friendly answers – going well and truly beyond its roots as a producer of rubber products. With preliminary sales of approximately €6.2 billion (2017), this international technology partner is active with core branches in Europe, Asia, North and South America.
