THE WORLD'S BEST TRACTORS RIDE ON THE WORLD'S BEST TRACK.
Case IH® chose Continental Trackman® XP as standard fitment on the new 2019 Quadtrac®. We also played a key role in the Quadtrac’s suspension system that contains the Continental/CNH co-patented mount system. This system, along with our roller and idlers wheels, provides greater flexibility and maneuverability on crowned ground or roads, and helps extend track life. Our partnership with Case runs deep. Together, we engineered the world’s first positive-drive system. It’s just another part of our history of pushing further, faster and smarter than anyone else in the field. After all, we helped pioneer the rubber track industry 20 years ago, and we’re continuing to set new standards with every new innovation we bring to market.

**Fully-Molded Is Stronger**
- Fully-molded track equals tougher, longer-lasting track.
- Non FULLY-molded has built-in weak points that can lead to early deterioration and failure.

On top of longer life, you get a more consistent rubber thickness which leads to greater stability and a smoother ride.

**Constructed for Longer Life**
- Wire-ply construction with 50% more wires per inch than our competition.
- Patented galvanized steel cables prevent corrosion and premature weakness.

All this adds up to a track that will last season after season, even under the heaviest load.

**Up to 70% Reduction in Vibration**
- Our exclusive Anti-Vibration Technology™ and advanced tread design on our XP track greatly reduces vibration by as much as 50% to 70% vs. standard track.
- Compound and construction improves drive lug engagement, reduces drive lug distress and extends track life.

Our tread design also maximizes traction and dirt cleanout for improved performance.
Continental Trackman® XP with ARMORLUG® has been thoroughly field-tested to deliver proven performance in the toughest conditions. Its improved wheel path rubber is formulated to minimize abrasion and punctures. It’s designed to perform over and above any other track of its kind. No wonder we’re OE on the Case IH® Quadtrac®.

- Exclusive ARMORLUG® technology extends life of the track up to 23% more over the competitor’s track
- Reinforcement fabric covers the entire drive lug and extends into the wheel path for added drive lug protection
- 4-year best-in-class limited manufacturer warranty

Do you need to haul the heaviest loads? Do you need to run at max horsepower and torque? Then you need Trackman® XP + ARMORLUG® ULTRA. It can handle today’s biggest, most powerful tractors and is designed to take on more, thanks to its patented drive lug with three fabric layers embedded in the lugs.

- First patented drive lug with three fabric layers embedded in the lugs
- Top layer of fabric extends into the wheel path for unmatched durability
- Offers up to a 25% increase in torque capability
- Lasts as much as 30% longer than any other positive-drive track
- 5-year best-in-class limited manufacturer warranty
RowTech™ with ARMORLUG® is made exclusively for the Case IH® Rowtrac™ and New Holland SmartTrax™ tractors. It’s designed with a wider, taller and more robust tread construction that puts more rubber to the ground where it matters the most.

- Engineered with more tread rubber content for longer track life – a 70% increase over the previous design
- Offers increased damage resistance and improved ride quality
- 4-year best-in-class limited manufacturer warranty

You demand the most out of your Case IH® equipment. Then demand the best track – Continental Trackman®. Our track delivers the performance you need in any field condition. That’s because Continental is the global leader in transportation, automation and materials handling. By combining our vast experience across multiple product lines, we’re able to solve today’s evolving challenges in the field.

That’s the Continental advantage built into every product we create.
## TRACKMAN® RUBBER TRACK SPECIFICATIONS FOR CASE IH® TRACTORS

Smart Solutions Beyond Rubber

The ContiTech division of the Continental Corporation is one of the world’s leading industry specialists. As a technology partner, our name is synonymous with expertise in development and materials for components made of natural rubber and plastics and also in combination with other materials such as metal, fabrics or silicone. By integrating electronic components, we are also generating solutions for the future.

Beyond products, systems and services, we also provide holistic solutions and have a formative influence on the industrial infrastructure. We see digitalization and current trends as an opportunity to work with our customers to add sustainable value – for both sides and for good.
